Letter of recommendation

To whomsoever it concerns

I am writing to offer my strongest recommendation for Mr. Shree Sandeep Choudhari, who is applying for a Master's program at your esteemed university. Shree joined the NanoBios Lab in April 2023, and during his time here, he has demonstrated remarkable technical ability, dedication, and a strong enthusiasm for research in mechatronics and automation.

From the outset, Shree impressed me with his self-driven approach to research. He independently conducted literature reviews, planned experiments, and executed them with meticulous precision. His ability to think critically and apply theoretical knowledge to real-world challenges has been a consistent strength throughout his projects.

In the "Sonophoresis for Transdermal Drug Delivery" project, Shree played a leading role in developing an ultrasound device tailored for biomedical use. He was responsible for circuit design and the fabrication of PCB layouts using KiCad. His attention to detail and deep understanding of hardware systems allowed him to troubleshoot effectively and deliver a working prototype that met key performance benchmarks. He also conducted extensive testing and validation of the device, analyzing frequency response and thermal behaviour under various conditions. His iterative approach to refining both hardware and signal output greatly improved the system's reliability. This level of ownership and refinement was critical to advancing the project toward its next phase.

In the "Transdermal Drug Delivery by Iontophoresis" project, he designed a current-controlled circuit that enabled precise drug delivery through the skin. His understanding of circuit modulation and control was evident in the stability and accuracy of the system. This project further showcased his ability to integrate biomedical needs with electronic system design. He further optimized the design to maintain stable current levels across varying skin impedance, which is vital in biomedical applications. His careful calibration and understanding of safety considerations ensured the system was both effective and compliant. These refinements significantly improved the system's usability and reproducibility.

Additionally, in the "3D Printed Microneedle-based Drug Delivery" project, Shree applied his skills in Autodesk Fusion 360 and SolidWorks to design high-resolution microneedle models, optimized for 3D printing. He also demonstrated strong hands-on experience with various 3D printer operations, fine-tuning settings to ensure dimensional accuracy and structural integrity.

His contributions particularly to the sonophoresis and iontophoresis projects have earned him authorship in forthcoming publications. Shree's ability to manage multiple technically complex projects simultaneously highlights his problem-solving ability, organizational skills, and professionalism.

Through his experiences, Shree has honed problem-solving, organizational, and interpersonal skills which will undoubtedly prove invaluable in his future endeavors. His diligent approach and insatiable curiosity, sets him apart as an outstanding candidate. He will undoubtedly contribute significantly to any institution that chooses to accept him into its community, in my opinion. In the light of Shree's exceptional qualities and achievements, I wholeheartedly recommend him for admission to your esteemed university. Should you require any additional information or assistance, please do not hesitate to contact me.

Sincerely,

26/09/25

Dr. (Prof.) Rohit Srivastava, FNASc, FRSc, FRSB, FNAE, FAMS
Sigma Xi Full Member
Dr. Abdul Kalam National Fellow
Dr. Shanti Swarup Bhatnagar Prize 2021 in Medical Sciences
Himanshu Patel Chair Professor
Department of Biosciences and Bioengineering
IIT Bombay, Powai, Mumbai-400076.

Prof. ROHIT SRIVASTAVA
DEPARTMENT OF BIOSCIENCES &
BIOENGINEERING
IIT BOMBAY, POWAI,
